

# EEGLAB Tutorial

## - 22 channels

(20–10 electrode placement system)

Jiazhen Hong  
May 2021

# BCI Competition IV - IIa

Jiazhen Hong

Data Type: GDF  
Analysis tool: EEGLAB  
Package: Biosig

Figure 3: Left: Electrode montage corresponding to the international 10-20 system. Right: Electrode montage of the three monopolar EOG channels.

Figure 1: Timing scheme of one session.

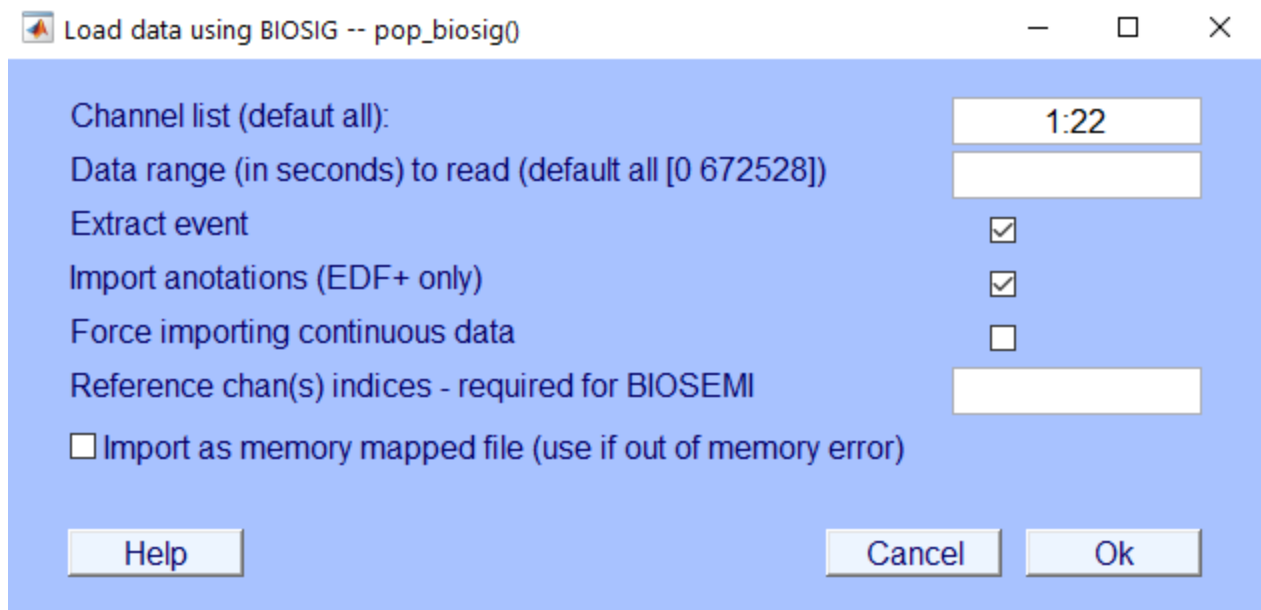

Figure 2: Timing scheme of the paradigm.

# Channel select

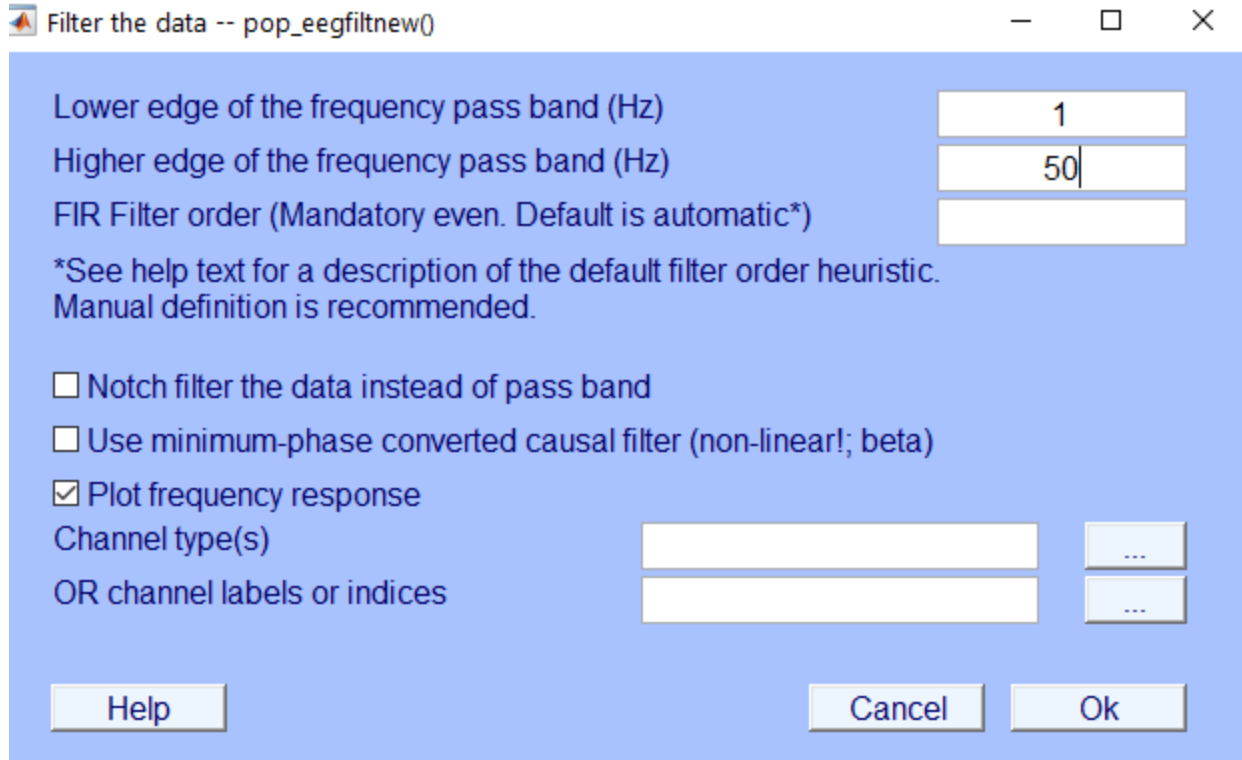

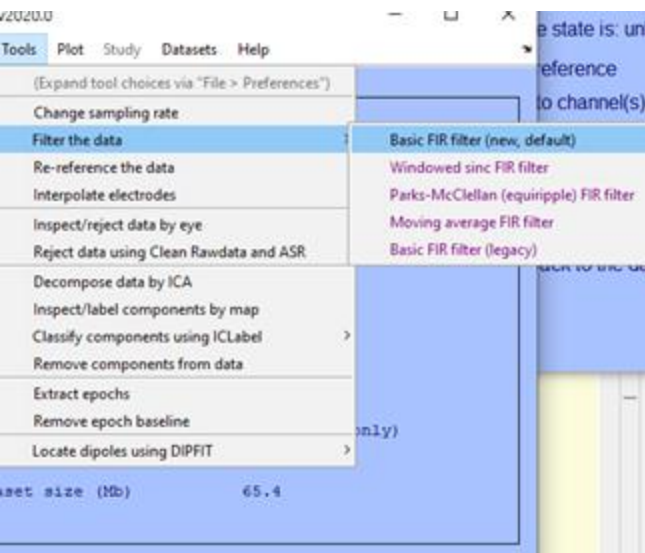

A screenshot of a Windows-style dialog box titled "Load data using BIOSIG -- pop\_biosig()". The dialog has a light blue background and standard window controls (minimize, maximize, close) in the top right corner. It contains several configuration options for loading data:

- "Channel list (default all):" followed by a text input field containing "1:22".
- "Data range (in seconds) to read (default all [0 672528])" followed by an empty text input field.
- "Extract event" with a checked checkbox.
- "Import anotations (EDF+ only)" with a checked checkbox.
- "Force importing continuous data" with an unchecked checkbox.
- "Reference chan(s) indices - required for BIOSEMI" followed by an empty text input field.
- A checkbox labeled "Import as memory mapped file (use if out of memory error)" which is currently unchecked.

At the bottom of the dialog are three buttons: "Help", "Cancel", and "Ok".

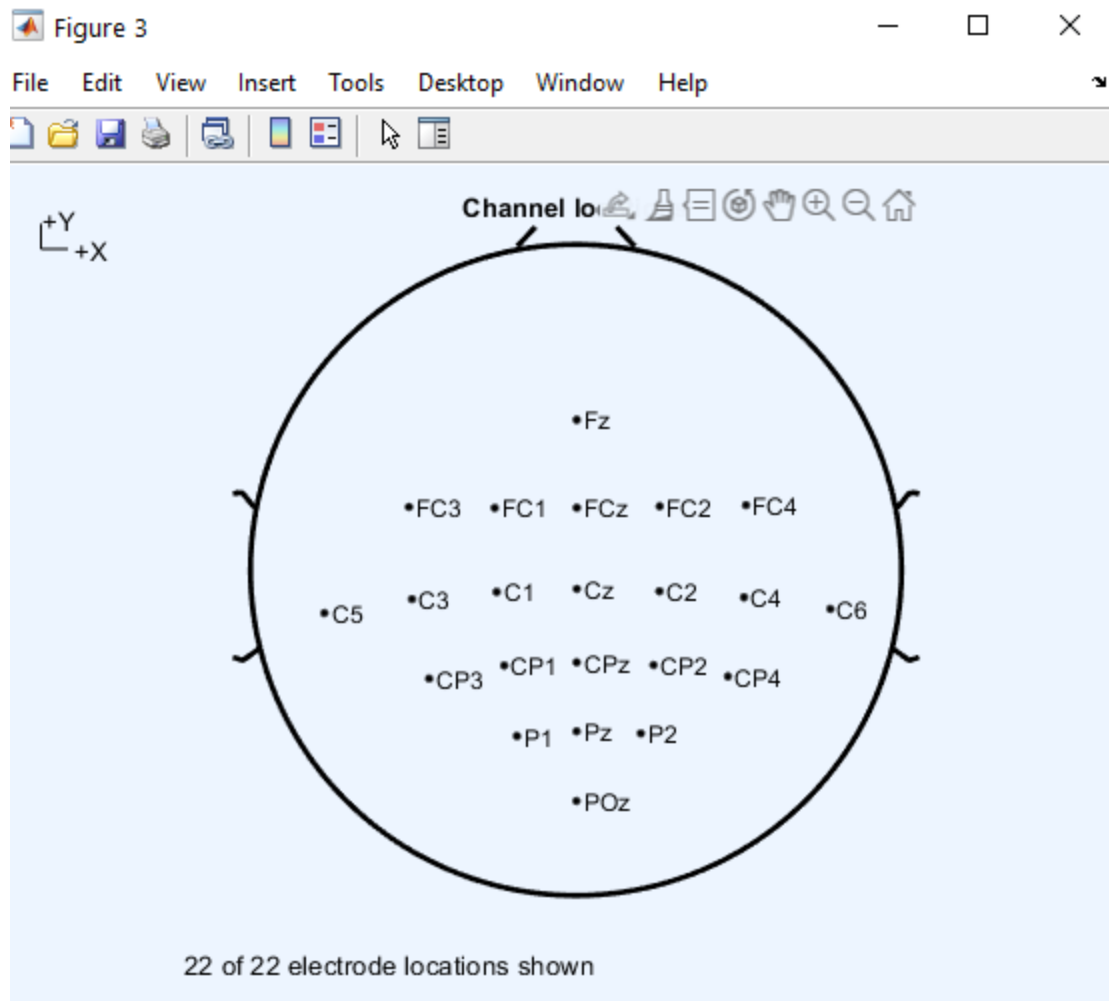

# 1 - Filter [1 50] hz

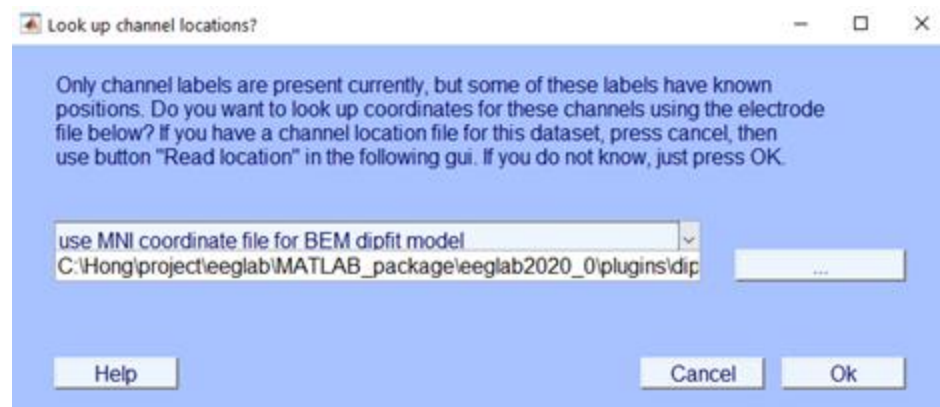

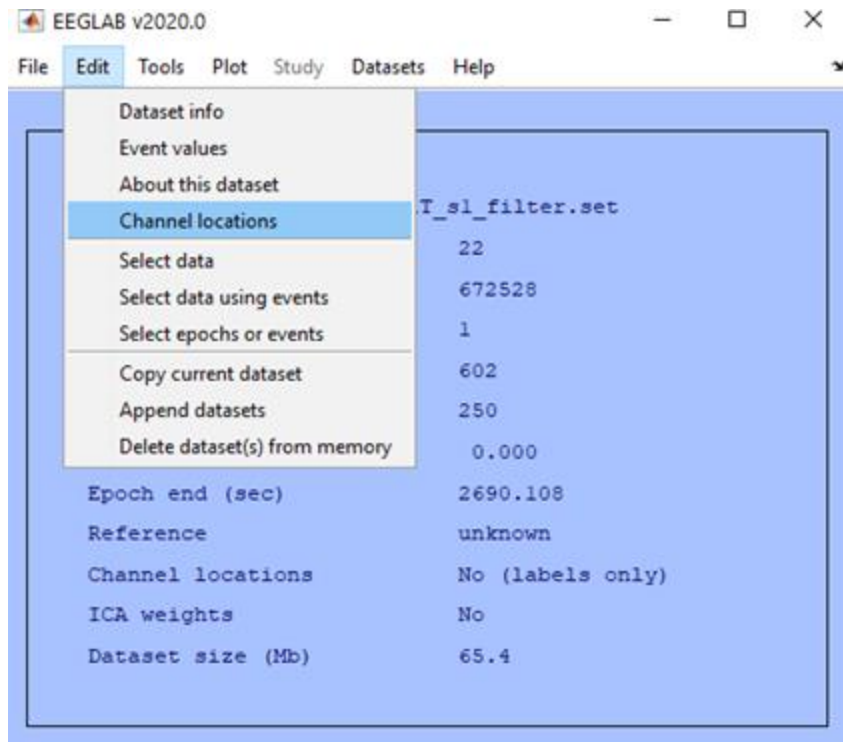

## 2-location

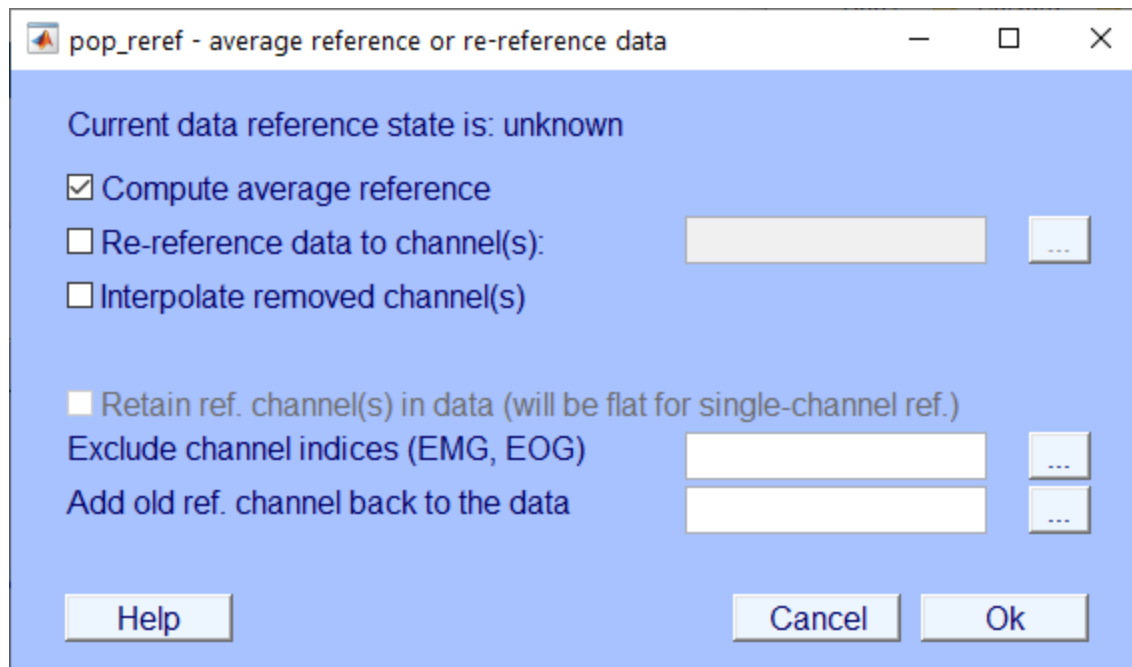

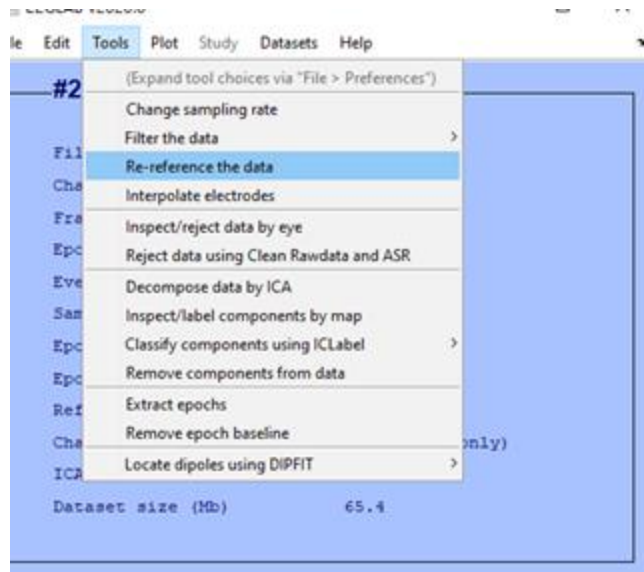

## 2 - location

### 3 - ref: average

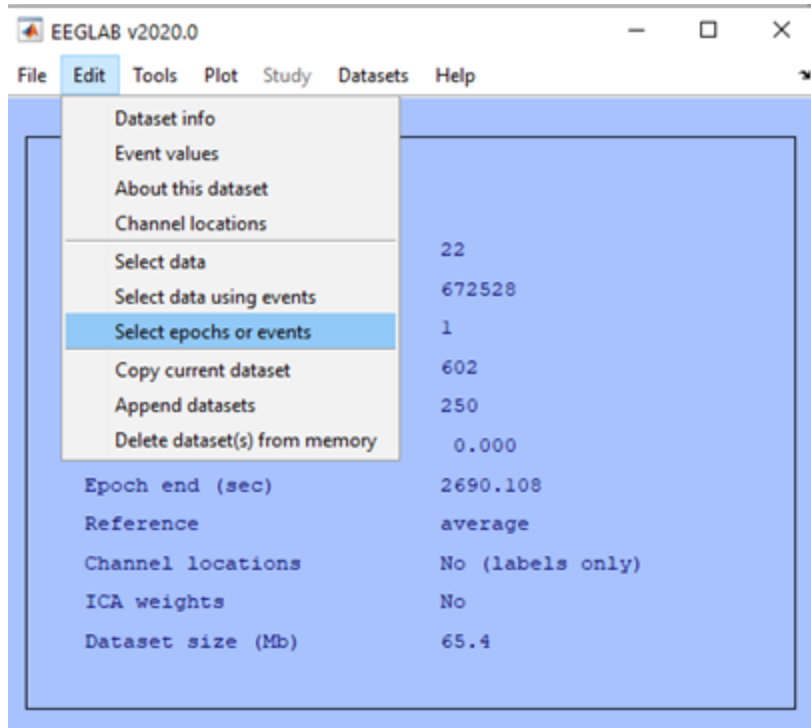

## 4 - flag event select (1)

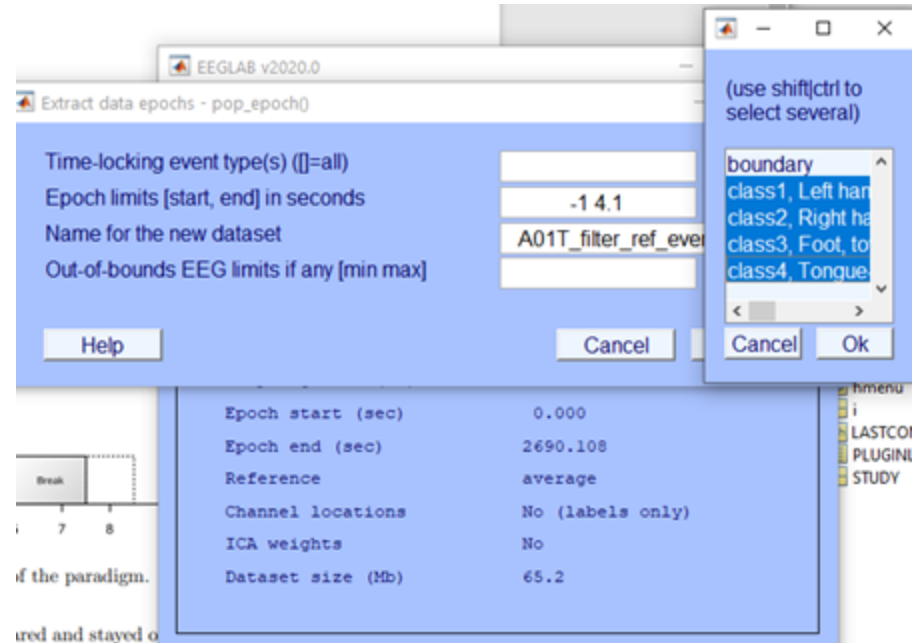

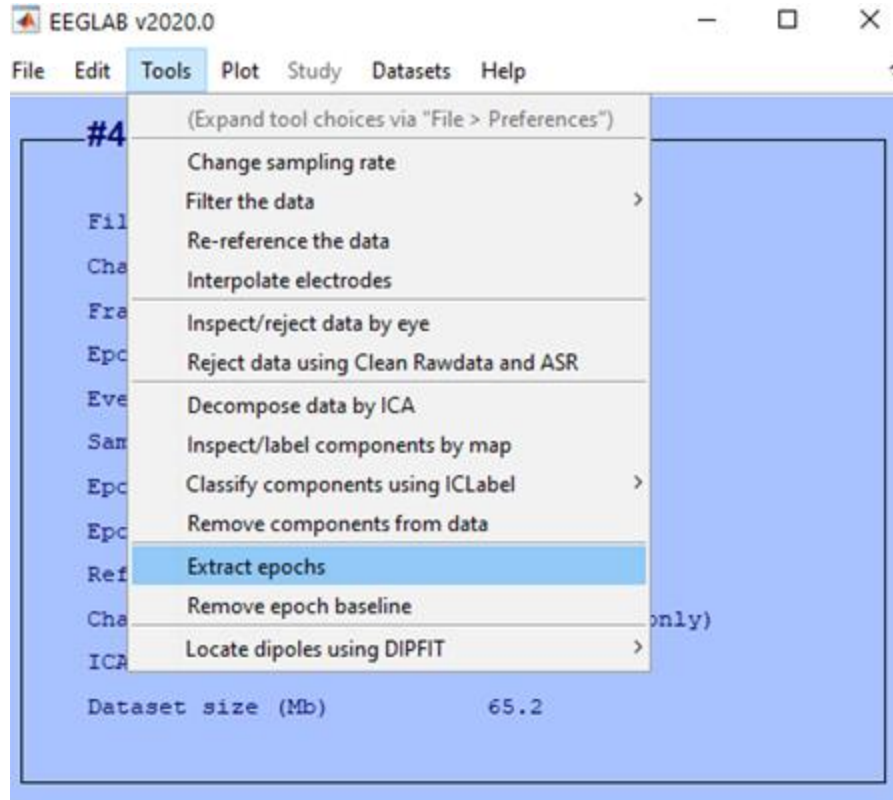

- eeg:Idling EEG - eyes open
- eeg:Idling EEG - eyes closed
- class4, Tongue- cue onset (BCI exp
- class3, Foot, towards Right - cue on
- class2, Right hand- cue onset (BCI
- class1, Left hand- cue onset (BCI e
- boundary
- Start of Trial, Trigger at  $t=0s$
- Rejection of whole trial
- 1072

## 4 - flag event select (2)

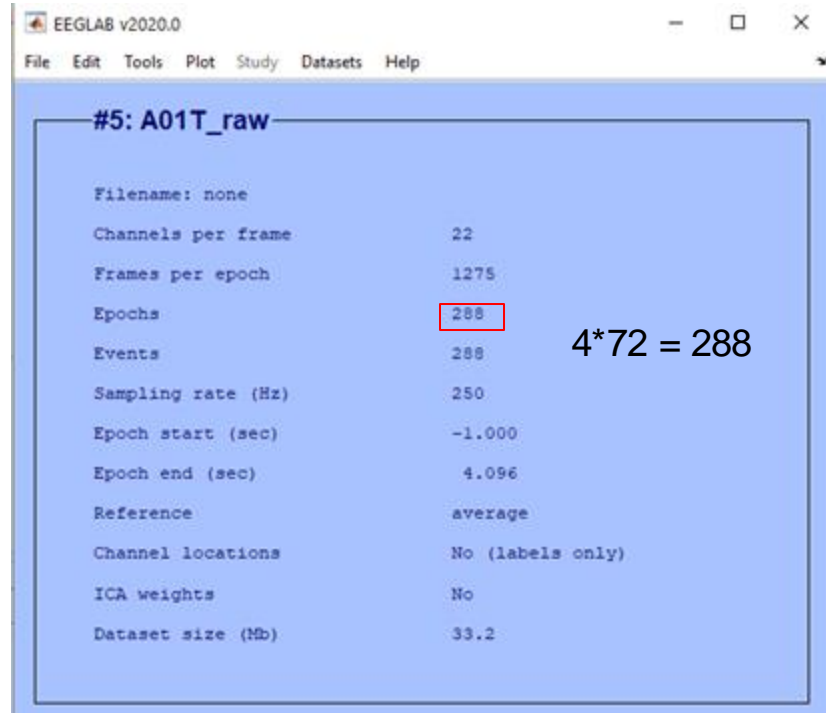

--- eeg:Idling EEG - eyes open  
--- eeg:Idling EEG - eyes closed  
--- class4, Tongue- cue onset (BCI exp  
--- class3, Foot, towards Right - cue on  
--- class2, Right hand- cue onset (BCI  
--- class1, Left hand- cue onset (BCI e  
--- boundary  
--- Start of Trial, Trigger at t=0s  
--- Rejection of whole trial  
--- 1072

5 - extract epochs [-1 4.1] (cue: 0-1.25s, mi: 1-4s)

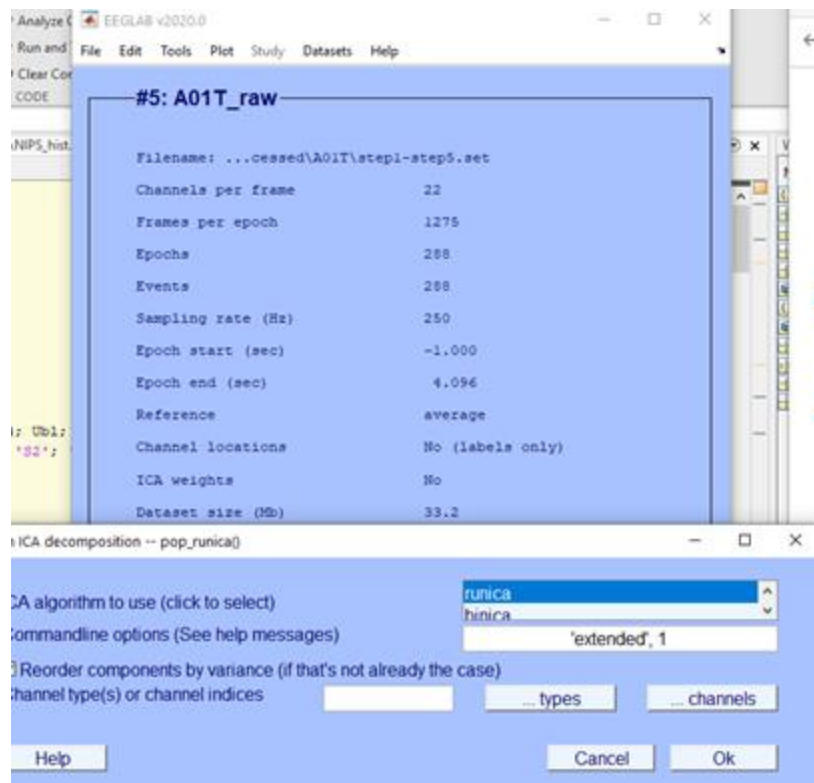

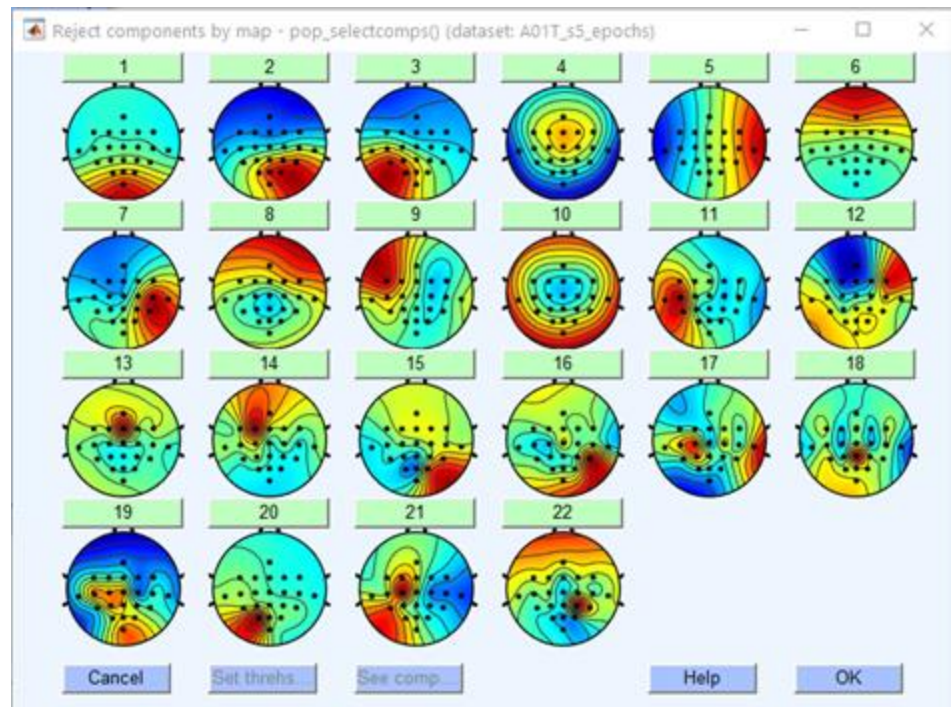

Demo after step5. And we name is \*\*raw

## 6 - ICA

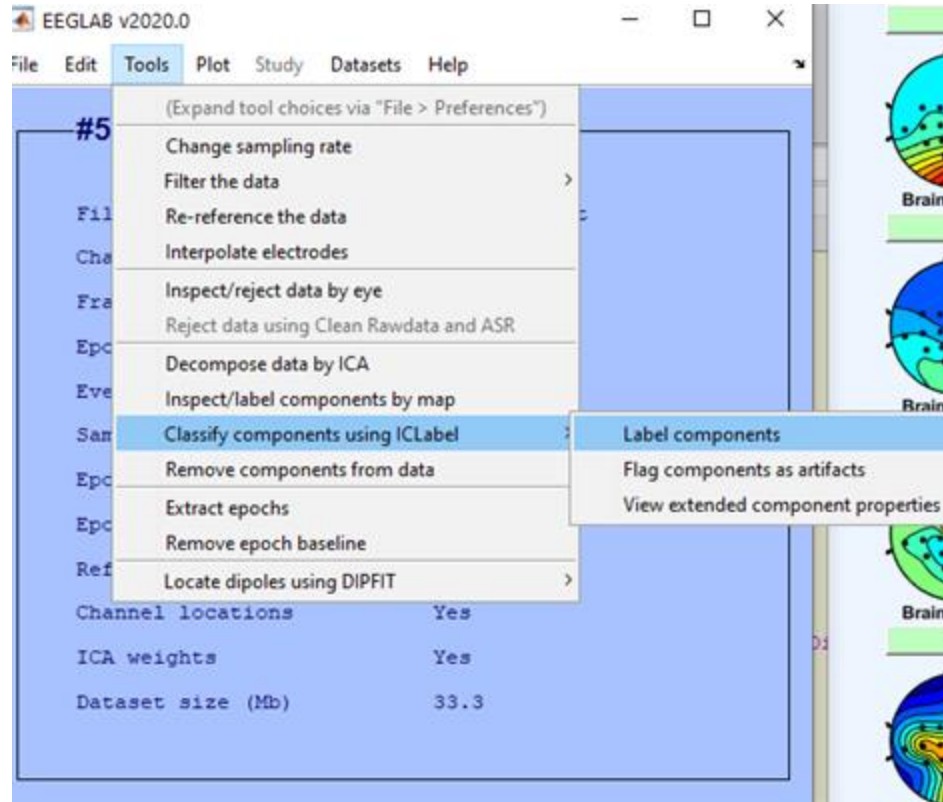

Observation by hand

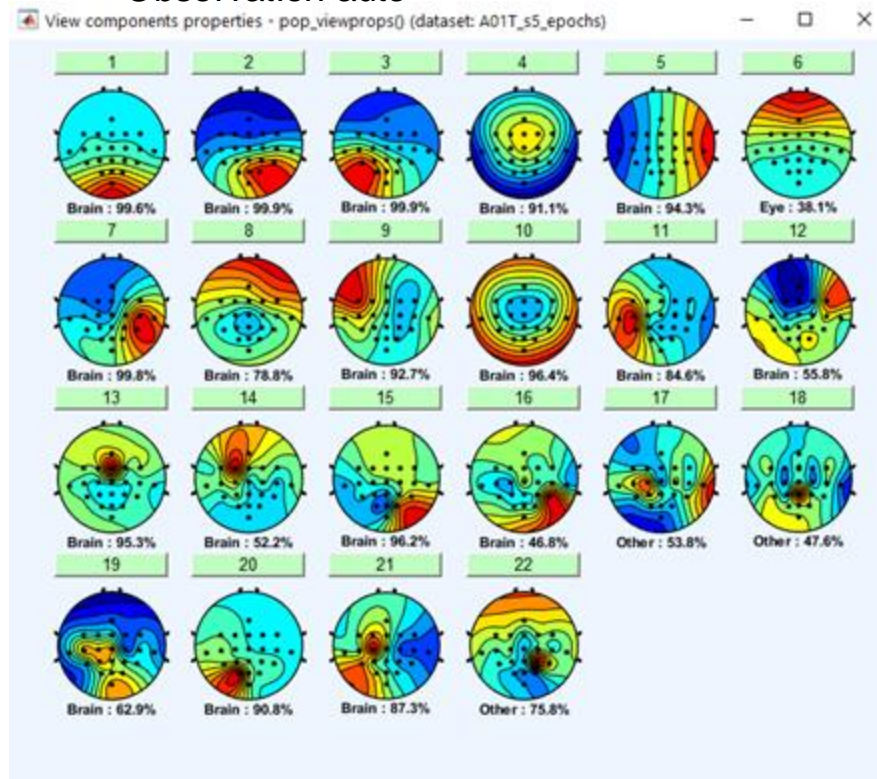

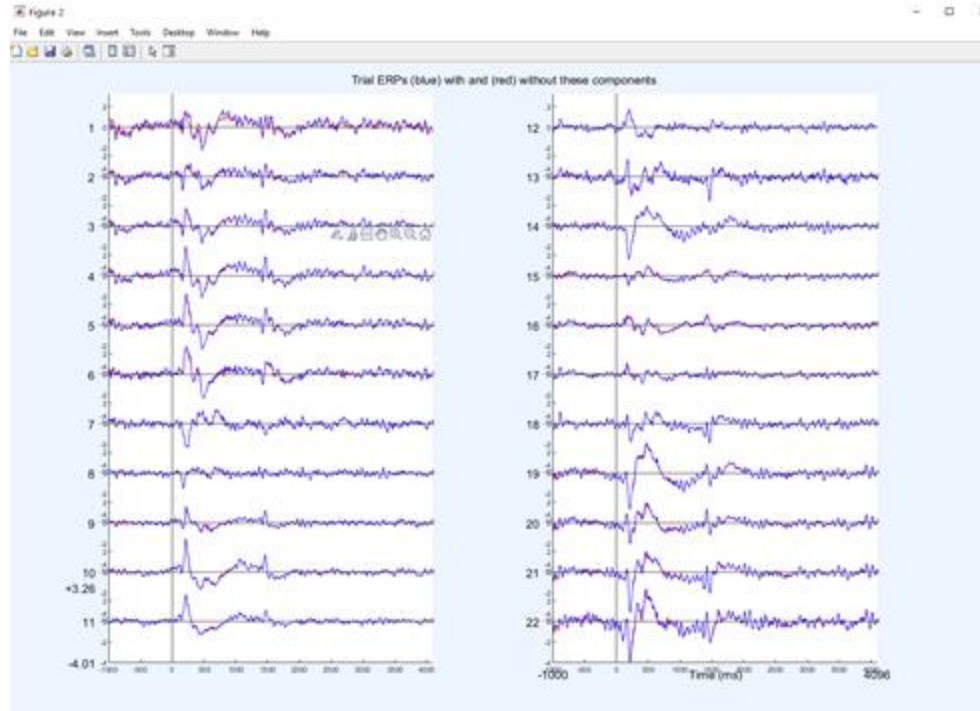

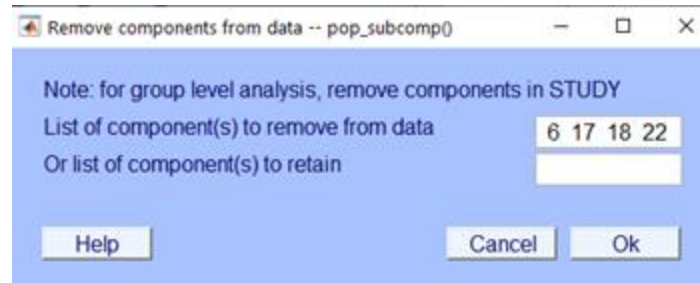

Mark 6 17 18 22

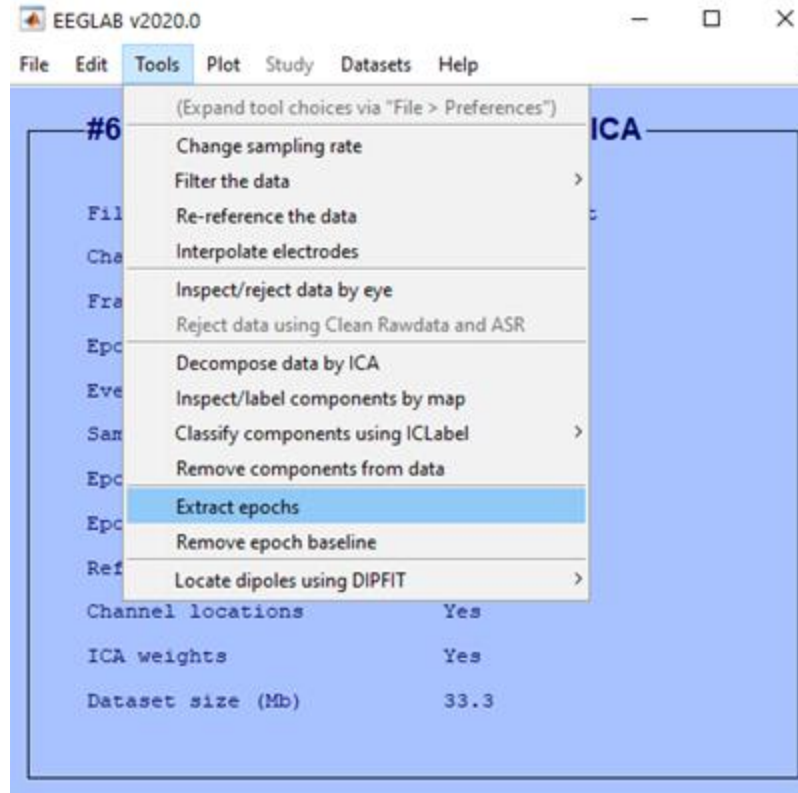

## Observation auto

# 7 - Remove components

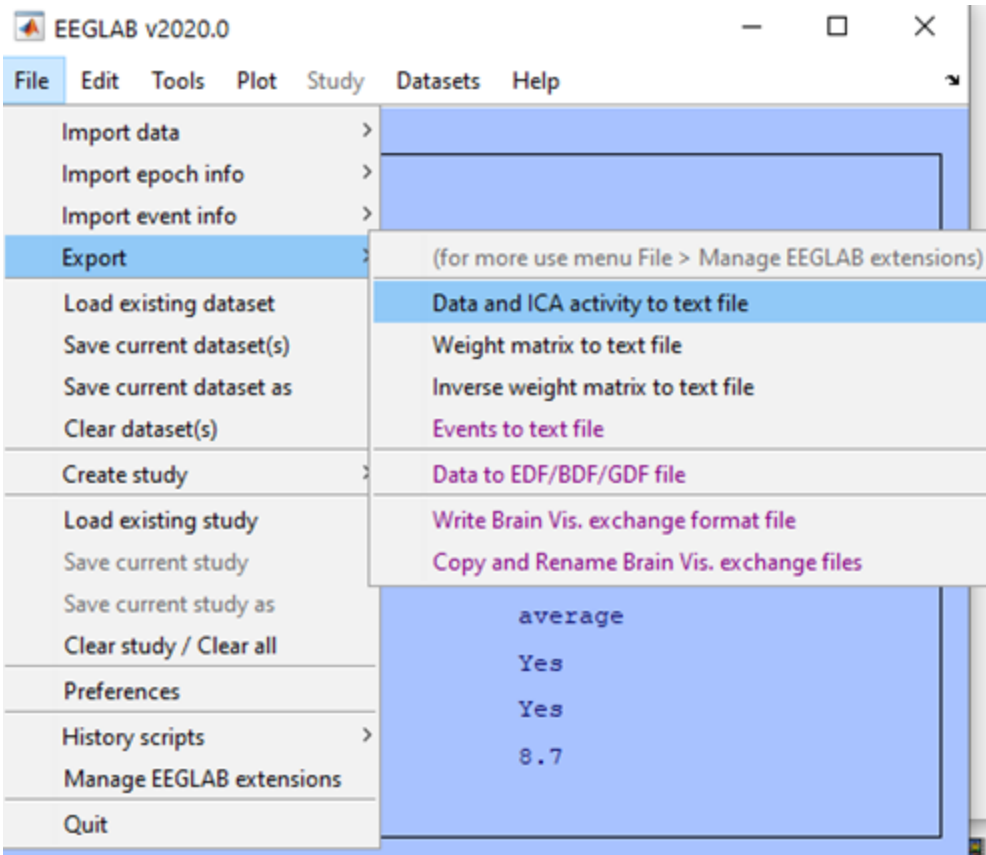

## 8 - divided data

# Appendix

# ICA method

The top part of the image shows a dialog box titled "Run ICA decomposition -- pop\_runica()". It contains the following fields and buttons:

- ICA algorithm to use (click to select): `runica`
- Commandline options (See help messages): `'pca', 50`
- Channel type(s) or channel indices:
- Buttons: Cancel, Help, Ok

The bottom part of the image shows the EEGLAB v2019.1 interface. The 'Tools' menu is open, and the option 'Decompose data by ICA' is highlighted. Below this, a table lists various options and their default values.

Option	Default	Comments
<code>'extended'</code>	0	1 is recommended to find sub-gaussians
<code>'stop'</code>	1e-7	final weight change → stop
<code>'lrate'</code>	determined from data	too small → too long... too large → weights blow up
<code>'maxsteps'</code>	512	more channels → more steps
<code>'pca'</code>	0 or EEG.nbchan or -1	Decompose only a principal data subspace

# Component remove

# Result 2a      Kappa value is required

## Data sets 2a [Graz]

The performance measure is kappa value. The first column shows the average across all subjects, columns 2 to 10 show the results for the individual subjects.  
 -> **Note: The expected kappa value, if classification is made by chance, is 0. <-**
